

Title: HyRobo Alien Mid 4

Author: Iron Bob

Build: Build from photos of a vintage R/C car

Speed: 31 mph

Class: Amateur

Description: HyRobo Alien Mid is a model I made to replicate a vintage R/C car that came out in 1986. It was one of my dream cars at the time but was too pricey for my wallet. Even in this day and age, being a vintage R/C car, and if you can find one it's very pricey. So this is the next best thing to owning one. I stylized it to replicate one of my favorite paint schemes from the time. I hope everyone enjoys it.

Special thanks: To Norfair for making two more optional paint schemes for the car. He tried to make them look like they are from the future. One as a test car and one as a full featured race car. I think he did an excellent job, they really make the car look incredible.

Install: unzip to your RVGL directory

Legals: You may distribute this file intact by any means available. Any distribution of this file must also include this readme file unedited. You may NOT distribute edited versions of this car without prior authorization and proper credit for the work done. All repaints of this car are welcome and encouraged.

Thanks for trying my car

Iron Bob
